Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Cleveland et al. (US Pat. 5,407,622) or Orlowski et al. (US Pat. 5,153,023). The references are cited by Applicants.

Cleveland teaches a plastic article having selected surfaces metallized (see abstract). The polymer article with an adherent metallic surface pattern may be formed by a two shot molding technique in which one molding shot utilizes a crystalline polymer resin and the other molding shot utilizes an amorphous polymer resin. The surface areas having the amorphous polymer resin is metallized (see col. 4, ln. 36-45).

Both crystalline resin and amorphous resin are thermoplastic (see col. 5, ln. 24-44). The metallization is carried out after activating process using plasma activation (see col. 6, ln. 44-56). Example I shows the circuit pattern on polyethersulfone resin containing 15% palladium-treated clay filler (see col. 12). The adherent is then immersed in an electroless copper solution to deposit a 25-micron layer of copper on the seed layer containing palladium-treated clay filler (see col. 13, ln. 26-50).

Orlowski discloses a plastic article having a thermoplastic substrate coated with a solution of palladium acetate. The coated substrate is then activated by a laser beam forming a

palladium metal pattern on the soften plastic surface. The substrate is then immersed in an electroless copper plating solution to form a copper layer of 25 microns.
